Nexgen Replit Proof of Use

Public deployment observed on 24 October 2026

https://orbyte-smart-yield-nexgen.replit.app/
Team: Nexgen. Project: NexFlow / Orbyte Smart Yield. Public homepage rendered in the browser with the project name, bakery closing workflow and preset bread-count showcase.

Read-only access evidence

HTTP 200: /, /login, /app, /app/assets/integration.js, /app/assets/i18n.js, /api/demo/session and /api/inventory. No public orders were created. Machine-readable checks and SHA256 hashes: docs/submission-evidence/replit-http-20261024.json.

Relationship to this repository

Compared with origin/main 7e264ee20d04a3fe968d133c4ff9f26105263165. integration.js matches byte-for-byte; sampled HTML and i18n.js differ. This supports a related NexFlow deployment, not full source or feature parity. No live YOLO inference or paid model call was verified.

Evidence still needed from the owner

TODO - HUMAN VERIFICATION: provide a Replit project/deployment dashboard screenshot showing project identity, deployed URL and successful deployment record, plus source commit if available. Confirm account ownership, plan/region and SDC voucher redemption. Redact secrets and billing details. This PDF provides public-access evidence; it is not a substitute for any additional organizer-mandated account evidence.
